Pai Pai Dreamers Package: Pricing & Value Upgrade Proposal

The Decision We're Solving

Cruise Ticket Pricing + Value Upgrade (Dreamers)

Current: \$125 per guest

Issue: USD value change → need ~10% value/price adjustment

Idea: Add a ~\$10 souvenir bag (per guest) → price could reach ~\$150

Key questions:

- Will cruise guests pay \$150?
- What is the lowest price we can do responsibly?
- What can we give at entry that matters?
- Will spending ~\$10/guest actually change outcomes (conversion, reviews, merch spend)?

Market Reality: What Cruise Guests Typically Spend

Important context (Ensenada cruise behavior):

- Average passenger spending in Ensenada is relatively low vs many ports (most guests don't buy premium add-ons).
- Shore excursions often sit in the **~\$70–\$100 range**, with some higher-priced options.

Implication:

- **\$150 is “premium tier.”** It can sell, but to a smaller slice of guests.
- If we jump to \$150, we risk **lower conversion** (fewer bookings), especially when guests compare options fast.

Pricing Math: Why \$150 Is Risky

FX (Foreign Exchange) adjustment math:

- $\$125 \times 1.10 \approx \$137.50 \rightarrow$ clean price point = \$139

What \$150 really means:

- \$150 isn't just "10% more." It's "10% more + a new recurring cost per guest."
- A \$10 bag is a permanent cost (every single guest), so you need a guaranteed lift in bookings or reviews to justify it.

Bottom line:

- If the goal is to protect conversion + keep value high, \$139 is the most defensible "lowest" price.

Is the \$10 Souvenir Bag
Worth It?

Pros (why it sounds good):

- Tangible value
- Guests leave with something in-hand
- Easy to explain ("includes souvenir bag")

Cons (why it's risky):

- It's a **recurring cost** that doesn't improve the actual experience (just "stuff")
- If the bag feels cheap, it can reduce perceived quality ("gimmick")
- It shifts attention away from the main product (the experience)

Conclusion:

- A \$10 physical bag is **not the best ROI**.
- Better strategy: spend small on something that feels premium and improves emotion + memory.

What Actually Matters at Entry (High Impact, Low Cost)

Entry gift should improve the day,
not just be a souvenir

“VIP moment” at entry: Photos!

Why this beats a \$10 bag:

Best entry value move: Water at entry (comfort + hospitality)

- Guests stay hydrated throughout the visit
- Immediately feels like “we take care of you”

- **Quick professional photo** (10–15 seconds, no line)
- Print later + give as goodbye gift (strong final memory)

Creates a premium feeling

Creates shareable content

Improves satisfaction without bulky cost

Photo Gift System: Invest in a Professional Camera

Recommendation: Invest in a **professional camera** to run a high-quality photo gift system.

Why this is worth investing in

- A printed photo feels **premium** (guests perceive it as **\$10+ value**)
- Consistent, high-quality photos = the gift feels intentional (not cheap)
- Creates a stronger “ending moment” when we give the photo as the goodbye gift

Extra business benefits

- Same camera can be used for **marketing**:
 - high-quality social media content (Reels/Shorts)
 - promo videos + ads
 - professional photos of guests + animals + park

Operational flow (simple)

- Take photo at entry (10–15 seconds) → print during visit → hand out at exit in a branded sleeve

In-Park Spend Protection: \$5 Pai Pai Credit (Why It Works + How to Run It)

Purpose: Protect (and increase) shop revenue even if the ticket price rises.

Why it works

- Feels like included value, not a “coupon”
- Reduces “I already paid a lot” hesitation by giving guests a reason to enter the shop
- Often leads to extra spending above \$5 (people “top off” to buy something better)

How to set it up (simple rules)

\$5 credit per guest, same-day only

Valid only for **merch/shop items** (NOT restaurant)

One clear message: **“Use it today—don’t waste it!”**

Redemption method (pick one):

- **Voucher card** collected at checkout (fastest)
- **Ticket stamp** (simple, no tech)
- **QR scan at POS** (only if your system is ready)

What the shop must have (so it converts)

- Enough items in the **\$5–\$15 range** (easy purchases): stickers, postcards, magnets, keychains, small plush
- A small **“Dreamers Picks”** display near entrance to make the choice easy

KPIs to track

- Credit redemption rate (target 50–70%+)
- Average merch spend per guest (before vs after)
- Most-purchased items (to optimize inventory)

Final Package Recommendation (All-In, No Add-Ons)

Recommended price (lowest clean move): \$139

Dreamers

Included value upgrades (no “welcome kit charge”):

- Welcome: water bottle at entry
- Experience: quick professional photo taken at entry
- Goodbye: printed photo gift at the end
- In-park spend protection: ticket includes \$5 Pai Pai Credit
 - Rules: same-day only, merch/shop only (not restaurant)

Why this is the best “value-per-dollar” plan:

- Avoids jumping to \$150
- Avoids a \$10 recurring “bag cost”
- Adds premium hospitality + keepsake + boosts merch sales

KPIs + Test Plan (Prove It Works)

Run a 2–4 cruise-week pilot (keep everything consistent)

Track these KPIs:

Conversion + demand

- Bookings per cruise day (before vs after price change)
- “No-sale” reasons (quick notes)

Guest happiness

- Post-visit satisfaction (simple 1-question rating)
- Review rate + review quality mentions (“photo,” “VIP,” “water,” “worth it”)

Merch performance

- **\$5 credit redemption rate** (goal: **50–70%+**)
- Average merch spend per guest (goal: **hold steady or increase**)
- % of guests spending above the credit

Operations

- Time per entry photo (goal: **10–15 seconds**)
- Print success rate (goal: **95%+** no issues)
- Staff workload feedback

Success definition

- Conversion stays stable (or improves) at \$139
- Merch spend holds or rises
- Reviews/satisfaction improve
→ Then scale permanently
