

Pai Pai Online Payments & No-Show Reduction Plan

By Yael Perez Ochoa

Problem + Goal

Problem we're solving (Pai Pai, Ensenada):

- Reservations are free → about 10% no-shows
- No-shows waste money/time because transport goes to the port and guests don't arrive
- Many customers want to pay online by card, but currently payment happens only on arrival

Goal:

1. Reduce no-shows (create financial commitment)
2. Let Americans pay online even though the service happens in Mexico

The Real Fix (Commitment at Booking)

This is not mainly a “terminal” issue — it’s a commitment issue.

Best solutions require one of these at booking:

- **Full prepay** online (confirmed only after payment)
- **Deposit** online (pay the rest at the park)
- **Card authorization hold** (charge only if they no-show / cancel late)

Result: fewer flakes + better planning for port pickup.

Option A (Recommended): Take Online Payments Through service (Stripe Mexico)

Why Option A is best

- Accept **international cards** online (Americans can pay)
- Avoid extra U.S. legal/tax complexity
- Fastest path to reduce no-shows

How it works

- Set up **Stripe (Mexico)** + create a “Cruise Ticket” product
- Use **Stripe Payment Links** (no-code) so customers can pay online
- After payment, redirect them to a simple confirmation page/form (date, cruise name, WhatsApp, party size)

Currency strategy

- Charge in **MXN** (U.S. card converts automatically), or
- Charge in **USD** (may include conversion fees depending on setup)

Option B (Best for Operations): Booking Platform + Payments

Why Option B helps

- Payment + reservation + automated confirmations in one system
- Better control of **capacity, pickup lists, reminders**
- Often supports **deposits / card holds / cancellation windows**

What it solves

- Reduces no-shows even further (reminders + policy enforcement)
- Cleaner day-of operations for transport + staff

Note: You can do Option A now, then upgrade into Option B later.

Option C (Not Recommended): U.S. Business + U.S. Card Processing

What it is

- Create/operate a U.S. business account to process cards in the U.S. even though the service is delivered in Mexico

Why it's not a good idea (for now)

- More complexity: U.S. filings, compliance, bookkeeping
- Payment processors may require specific U.S. presence/verification
- You still owe correct taxes/records in Mexico since the service happens in Mexico

When to consider it

- Only if Option A/B truly can't work for Pai Pai.

Step-by-Step Plan (No-Code “Go Live” Version)

Step 1: Stripe setup

- Create/sign in to Stripe → finish verification → connect Mexico bank for payouts

Step 2: Create product

- Stripe Dashboard → Products → Add product
- “Pai Pai Cruise Ticket – Dreamers” → set one-time price

Step 3: Create Payment Link

- Dashboard → Payment Links → New
- Select product → require email + phone → create link

Step 4: Connect payment to reservation

- After payment → redirect to a confirmation page/form
(cruise name/date, pickup time, WhatsApp, party size)

Step 5: Website update

- Add “Pay Now to Confirm” button
- Make policy clear: “Reservation is confirmed only after payment.”

Step 6: Operational rule

- Shuttle pickup list = only paid confirmations
(reduces wasted trips)
